GOOD

Screen System

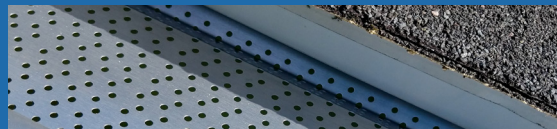

Our "Good" gutter systems use a screen that will keep some debris out but will still likely require cleaning and maintenance.

BEST

Shur-Flo System

Installed to fit snugly to the top of your gutters, the Shur-Flo system will keep leaves, pine needles, twigs and small debris suspended on top of the panel.

Air circulation from above and below allows the leaves and debris to dry up and blow away in the wind. The low profile makes it virtually invisible from the ground, and there is no lifting or penetration of your roof shingles, so it will not void any roof warranties.

**No Slots/
Gaps to
Encourage
Infestation**

**Keeps Gutters
Free Flowing**

**Won't
Void Roof
Warranties**

BETTER

Champion MicroMESH System

The holes in our MicroMESH Gutter Guards are small enough to keep out some of the tiniest debris and large enough to allow unrestricted water to flow without overshooting of the gutter.

Using a patented hemmed mesh process, the gutter guard securely links into the micro mesh, producing a connection that won't break apart or rust due to weather, debris, or plain old wear and tear.

**Handles 60
Gallons of
Water Per
Minute**

**.440 Micron
Opening**

**MicroMESH
eliminates
the need for
continuous
cleaning**
